

HCE Series

Miniature amplified pressure sensors

FEATURES

- 10 mbar to 5 bar, absolute, gage or differential pressure
- Barometric pressure ranges
- Digital SPI bus and analog output
- Precision ASIC signal conditioning
- Calibrated and temperature compensated
- Matched pressure port volumes
- Miniature SMD housings
- RoHS compliant

SPECIFICATIONS

Maximum ratings

Supply voltage V_s	
HCE...3	2.7 ... 3.3 V _{DC}
HCE...5	4.5 V ... 5.5 V _{DC}
	max. 6.50 V _{DC}

Output current	
Sink	1 mA
Source	1 mA

Lead specifications

Average preheating temperature gradient	2.5 K/s
Soak time	ca. 3 min
Time above 217°C	50 s
Time above 230°C	40 s
Time above 250°C	15 s
Peak temperature	260°C
Cooling temperature gradient	-3.5 K/s

Temperature ranges⁶

Compensated	0 ... 85°C
Operating	-25 ... 85°C
Storage	-40 ... 125°C

Humidity limits (non-condensing)	0 ... 95 %RH
----------------------------------	--------------

ELECTRICAL CONNECTION

HCE Series

Miniature amplified pressure sensors

PRESSURE SENSOR CHARACTERISTICS

(T_A = 25 °C)

Part no.	Operating pressure	Proof pressure ^{3,5}	Burst pressure ^{4,5}
HCEM010...B...	0...±10 mbar	250 mbar	500 mbar
HCEM020...B...	0...±20 mbar	500 mbar	750 mbar
HCEM050...B...	0...±50 mbar	750 mbar	1.2 bar
HCEM100...B...	0...±100 mbar	1.2 bar	2 bar
HCEM200...B...	0...±200 mbar	2 bar	2 bar
HCEM500...B...	0...±500 mbar	2 bar	2 bar
HCEB001...B...	0...±1 bar	3 bar	5 bar
HCEM010...U...	0...10 mbar	250 mbar	500 mbar
HCEM020...U...	0...20 mbar	500 mbar	750 mbar
HCEM050...U...	0...50 mbar	750 mbar	1.2 bar
HCEM100...U...	0...100 mbar	1.2 bar	2 bar
HCEM200...U...	0...200 mbar	2 bar	2 bar
HCEM500...U...	0...500 mbar	2 bar	2 bar
HCEB001...U...	0...1 bar	3 bar	5 bar
HCEB002...U...	0...2 bar	6 bar	7 bar
HCEB005...U...	0...5 bar	7 bar	7 bar
HCE0611AR...	600...1100 mbar(a)	3 bar	5 bar
HCE0811AR...	800...1100 mbar(a)	3 bar	5 bar

Other pressure ranges are available on request. Please contact First Sensor.

Specification notes:

1. Total accuracy is the combined error from offset and span calibration, linearity, pressure hysteresis, and temperature effects. Linearity is the measured deviation based on a straight line. Hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure. Calibration errors include the deviation of offset and full scale from nominal values.
2. Full Scale Span (FSS) is the algebraic difference between the output signal for the highest and lowest specified pressure.
3. Proof pressure is the maximum pressure which may be applied without causing durable shifts of the electrical parameters of the sensing element.
4. Burst pressure is the maximum pressure which may be applied without causing damage to the sensing element or leaks to the housing.
5. The HCE common mode pressure is 2 bar for all devices up to 500 mbar and 7 bar for all other devices. Common mode pressure is the maximum pressure that can be applied to both ports of a differential pressure sensor simultaneously without damaging the sensor housing.
6. Extended temperature ranges on request. Please contact First Sensor.
7. Max. delay time between pressure change at the pressure die and signal change at the output.
8. The response time depends on the adjusted internal A/D resolution of the sensor. For 14 bit it is typ. 1 ms. Other A/D resolutions and response times are available on request. Please contact First Sensor for further information.
9. Sensors with lower current consumption are available on request. Please contact First Sensor for further information.

Output	at max. specified pressure	2.24	2.25	2.26	
	at min. specified pressure	0.24	0.25	0.26	

SPI - SERIAL PERIPHERAL INTERFACE

Introduction

The HCE is capable to generate a digital output signal. The device runs a cyclic program, which will store a corrected sensor value with 14 bit resolution about every 500 μ s within the output registers of the internal ASIC. This cyclic program runs independent from the bus communication. In order to use the pressure sensor for digital signal readout, it should be connected to a SPI Master device.

SPI specifies four signals: The clock (CLK) is generated by the master and input to all slaves. MOSI carries data from master to slave. MISO carries data from slave back to master. A slave select line (SS) allows individual selection of a slave device.

SPI Modes

A pair of parameters called clock polarity (CPOL) and clock phase (CPHA) determine the edges of the clock signal on which the data are driven and sampled. Each of the two parameters has two possible states, which allows for four possible combinations, all of which are incompatible with one another.

In general the HCE series supports all combinations of clock phase (CPHA) and polarity (CPOL). By default it is programmed to CPHA = 0 and CPOL = 0, which means that data transmission starts with the rising first clock edge (see Fig 1).

Slave select

The falling edge of the SS line indicates the beginning of the transfer. Additionally the SS line must not be negated and reasserted between the three bytes to be transmitted.

Data operation

The MOSI line should always be set to high level. So there is no data transmission from master to slave. Because of internal configuration the slave will answer the first byte with an FFxh. The second and third byte contain the 15 bit pressure information (see Fig. 2).

**For further information please refer to
First Sensor's SPI bus application note**

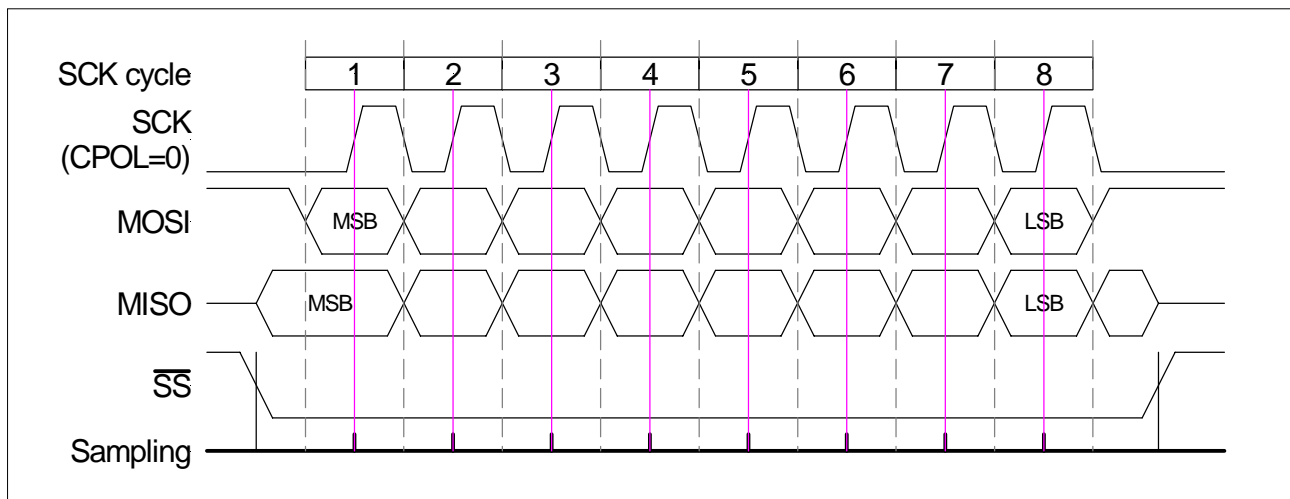

Fig. 1: Example of a standard 1 byte SPI data transfer for CPHA=0 and CPOL=0

Fig. 2: 3 byte data stream between HCE sensor and master containing the pressure value as a 15 bit information

SPI - SERIAL PERIPHERAL INTERFACE (cont.)

Interface parameters

Parameter	Symbol	Min.	Typ.	Max.	Unit
Input high level		90		100	% of Vs
Input low level		0		10	
Output low level				10	
Pull-up resistor		500			Ω
Load capacitance @ MISO	C_{MISO}			400	pF
Input capacitance @ each pin	C_{SPL_IN}			10	
Signal clock frequency	f_{SCK}	100*		640	kHz
MISO hold time after SCK sample slope	$t_{SPL_HD_MISO}$	200			ns
MOSI setup time before SCK sample slope	$t_{SPL_SU_MOSI}$	$2/f_{CLK}$			
/SS setup time before SCK sample slope	$t_{SPL_SU_SS}$	10			ns
/SS hold time after SCK sample slope	$t_{SPL_HD_SS}$	$1/f_{CLK}$			

* recommended

Note: First Sensor recommends communication speeds of at least 100 kHz (max. 640 kHz). Please contact us for further information.

ORDERING INFORMATION

Options	Series	Pressure range		Pressure mode		Calibration		Housing		Porting		Grade		Voltage		
	HCE	0611	600...1100 mbar	A*	Absolute	B	Bidirectional	E*	SMD, 2 ports, same side	8*	Straight	P	Prime	3	3 V	
		0811	800...1100 mbar	D	Differential	U	Unidirectional			9**	Barbed			5	5 V	
		M010	10 mbar	G	Gage	R*	Barometric	H**	SMD, 1 port							
		M020	20 mbar													
		M050	50 mbar													
		M100	100 mbar													
		M200	200 mbar													
		M500	500 mbar													
		B001	1 bar													
(B001A)	1 bara															
B002	2 bar															
B005	5 bar															
				* only available for pressure ranges 0611, 0811, B001, B002		* for pressure ranges 0611, 0811		Housings Q only available up to 1 bar. Please contact First Sensor. * standard for differential devices, "D" ** standard for absolute and gage devices, "A" and "G"		* standard for devices up to 500 mbar and barometric ranges ** standard for devices from 1 bar						
Example:	HCE	M050		D		B		E		8		P		5		

Note: Devices highlighted in grey are preferred stock items

Custom specific pressure ranges and mechanical or electronic sensor modifications are widely available:

- I²C, switching and custom specific outputs
- Dual inline packages (DIP)
- Single inline packages (SIL)
- ... etc.

Please contact First Sensor for further information.
